Abstract. The assessment of attachment beyond infancy remains a controversial issue. Over the past 20 years adolescent attachment has been assessed in a variety of ways but no 'gold standard' for its measurement has emerged. Considering the complexity of attachment theory and the implications for measuring such relationships during adolescence, this article undertakes a review of self-report attachment measures utilised for this age group.

In recent years, the number of empirical studies examining attachment in adolescence has grown considerably, with most focusing on individual difference in attachment security. This volume goes a step further in extending knowledge and understanding. The physical, cognitive, emotional, and social changes that characterize adolescence invite a closer conceptual look at attachment processes and organization during this period. The chapter authors, leading researchers in attachment in adolescence, address key topics in attachment process in adolescence. These include issues such as the normative distancing from parents and the growing importance of peers, the formation of varied attachment hierarchies, the changing nature of attachment dynamics from issues of survival to issues of affect

regulation, siblings' similarity in attachment representations, individual differences in social information processes in adolescence, and stability and change in attachment representations in a risk sample. Together the chapters provide a compelling discussion of intriguing issues and broaden our understanding of attachment in adolescence and the basic tenets of attachment theory at large. This is the 117th issue of the Jossey Bass quarterly report series *New Directions for Child and Adolescent Development*.

The applicability of attachment theory and research to social work and social policy relating to infants and children is well-established. Yet, its usefulness for enhancing the understanding of adults and their needs, both individually and as a group, has been less featured in the attachment literature. *Adult Attachment in Clinical Social Work Practice* is a wide-ranging look at attachment theory and research, its application to adults, and its natural fit with the social work profession. This edited volume covers the applicability of adult attachment theory to the clinical social work profession's various domains that include human behavior, practice, policy, research, and social work education. It addresses the broad spectrum of clinical social work, including practice in a variety of public and private settings and with a number of diverse populations, including racial-ethnic groups, gays and lesbians, trauma survivors, and child welfare parents. The book highlights the underemphasized contribution of the social work profession to the development of attachment theory and research.

attachment together with a complete overview of the Adult Attachment Projective Picture System (AAP), the authors' validated developmental assessment. In addition to identifying attachment classification groups, the AAP yields important information about dimensions--including defensive processes--not evaluated by other available measures. Detailed case illustrations show what the AAP looks like "in action" and what it reveals about individuals' early experiences, sense of self, and capacity to engage in close, protective relationships. The AAP can be used in clinical or research settings; the concluding chapter discusses promising applications to studying the neurobiology of attachment.

Provides a comprehensive study of human development from conception to adulthood. It explores the foundations of modern developmental thought, through the work of researchers such as Freud and Erikson, and also incorporates the latest international research. Slee at Flinders, Campbell at QUT, Spears at Uni of South Australia.

"With contributions from leading investigators, the book explores the effects on attachment of a wide range of factors in middle childhood, including children's broadening network of social relationships. Compelling data are presented on whether the quality of attachment in middle childhood can be predicted by assessments earlier in life, and what may explain changes over time."--BOOK JACKET.

The book provides guidelines and practical creative exercises which equip creative major students as well

as creative practitioners with fundamental knowledge on creation methods. Combination of functionality, simplicity and aesthetics in modern design is considered a fundamental design principle in the Bauhaus School in Germany, and, inspired by the School, the creative handcrafting exercises and the concepts introduced in this book are primarily coherent with this principle. The book draws a direction between two and three dimensional material-based design and modern digital creation process. The first part of the book introduces various creative handcrafting exercises on proportion, geometry and modularity, among other fundamental design principles. The creative exercises will sensitize students on aesthetical and structural issues, and thus serve as an essential building block for application of the design principles to computer-based creative processes, which are introduced in the second part of the book. The process of emotional attachment, a critical factor in infant and child development, is now recognized as an important component of satisfying adult relationships. Building on the research and theories of developmental psychologists, ethologists, and social scientists, this ground-breaking book describes the characteristics and role of attachment in the adult years and presents new perspectives for understanding and changing an adult's ability to form life-enhancing personal relationships. Chapters provide methods for applying ideas about adult attachments to social research and clinical intervention, defining attachment for adults with supporting research and clinical evidence, explicating the varieties of attachment patterns for adults, and for demonstrating the clinical and therapeutic relevance of these constructs. This book is aimed at developmental psychologists, clinicians, and social scientists in psychiatry, psychology, and related mental health disciplines. Also an appropriate text for theoretical and clinical courses in psychiatry, psychology, and social work.
