Air conditioners (also called AC units) use refrigerant to condition the air and are typically used for cooling and dehumidifying hot, humid environments. They include units for cooling only and units with a heat pump for cooling and heating. Evaporative and misting coolers use water to cool and humidify the air in hot, dry environments.

~~Air Conditioners and Air Conditioner Accessories ...~~

An air conditioner works using a thermodynamic cycle called the refrigeration cycle. It does this by changing the pressure and state of the refrigerant to absorb or release heat. The refrigerant (aka coolant) absorbs heat from inside of your home and then pumps it outside. Most air conditioners are air-source, split systems.

~~How an Air Conditioner Works | The Refrigeration Cycle~~

Air conditioning (often referred to as AC, A/C, or air con) is the process of removing heat and moisture from the interior of an occupied space to improve the comfort of occupants. Air conditioning can be used in both domestic and commercial environments. This process is most commonly used to achieve a more comfortable interior environment, typically for humans and other animals; however, air ...
