Definition: Graphic images are stored digitally using a small number of standardized graphic file formats, including bit map, TIFF, JPEG, GIF, PNG; they can also be stored as raw, unprocessed data.

Graphic File Formats | Computerworld

Images come in several different types, and each has a use. Some of the file suffixes you'll run into are JPEG, TIFF, PSD, BMP, PICT, and PNG. Here are some general guidelines for the uses of each kind of image file: If the images are for web or mobile, use JPEG, PNG, or GIF.

The Best Image Format Types for Different Needs

PNG (Portable Network Graphics) PNG is a high-quality file format used for images. This file type is based on the lossless compression, which means that it supports high-quality images for online use while retaining the original image colors and sharpness. Unlike JPEG files, PNGs also support images with transparent backgrounds.

The Different Types of Files and How to Use Them

It is the standard format for high quality images. Though large in size, TIF formats are considered to be the most reliable format for high quality images. PNG: Portable Network Graphics. The PNG file format is most commonly used for use online and on websites due to their low resolution.
