One of the basic concepts in number theory is that of a prime number. An integer p is prime if $p \neq \pm 1$ and the equation $p = ab$ has no solution in integers a and b except those for which $a = \pm 1$ or $a = \pm p$. Briefly, then, a prime is an integer $\neq \pm 1$ which has no nontrivial divisors.

The systematic study of number theory was initiated around 300B.C. when Euclid proved that there are innitely many prime numbers, and also cleverly deduced the fundamental theorem of arithmetic, which asserts that every positive integer factors uniquely as a product of primes.
