Behavioural therapies provide tools for helping a person learn ways to change certain behaviours. Cognitive therapies can also help a person to change the way they think about tics in addition to taking certain action. Medication can be used to help reduce the frequency and/or intensity of tics for a period of time.

*Managing Tourette Syndrome*

This 11-session program uses Behavior Therapy to help your child become aware of his/her tics and the situations that make them worse. The program also includes relaxation techniques designed to help combat anxiety and stress, as well as relapse prevention strategies.

*Resource library - Managing TS - Tourettes Action*

Tourette's syndrome is a condition that causes a person to make involuntary sounds and movements called tics. It usually starts during childhood, but the tics and other symptoms usually improve after several years and sometimes go away completely. There's no cure for Tourette's syndrome, but treatment can help manage symptoms.
