York City is the astounding result of those
efforts, reconstructing, in words and
images, the wild isla. On September 12,
1609, Henry Hudson first set eyes on the
land that would become Manhattan. It's
difficult for us to imagine what he saw,
but for more than a decade, landscape
ecologist Eric Sanderson has been
working to do just that.

In his new book *Mannahatta: A Natural History of New York City*, ecologist Eric W. Mannahatta: A Natural History of New York City is the astounding result of those efforts, reconstructing in words and images the wild island that millions now call home. By geographically matching an 18th-century map with one of the modern city, examining volumes of historic documents, and collecting and analyzing scientific data, Sanderson re-creates the forests of Times Square, the meadows of Harlem, and the wetlands of downtown.
