Relating Materials Properties to Structure: Handbook and Software for Polymer Calculations and Materials Properties lays the foundation for an understanding of the basic structure of materials and the significant distinguishing features between major classes. It provides a method of comparison between the structure of different classes of materials and their attendant properties. The structural differences between individual polymers and the resultant properties are a primary focus, since this is the only class of materials where data and techniques allow properties to be estimated. This book and CD-ROM software package provides an easy, straightforward technique for estimating polymer properties via simple software. The software permits the user to see the effects of changing a structure, and to estimate the properties of a polymer that might be unavailable or very time-consuming to find. The ability of the software to estimate the miscibility of various polymer blends is one of its most valuable aspects. While most methods that are extremely easy make simplifying assumptions that adversely affect accuracy, in this case, the inaccuracies introduced do not obviate the usefulness of the software or techniques.

Relating Materials Properties to Structure: Handbook and Software for Polymer Calculations and Materials Properties Software offers the most comprehensive system presently available. Invaluable to all involved in fundamental polymer research, new product polymer alloy development, investigating polymer/plasticizer miscibility, and those involved in designing and specifying polymeric materials required to meet mechanical, physical, thermal, electrical and blending properties.

This engaging and clearly written textbook/reference provides a must-have introduction to the rapidly emerging interdisciplinary field of data science. It focuses on the principles fundamental to becoming a good data scientist and the key skills needed to build systems for collecting, analyzing, and interpreting data. The Data Science Design Manual is a source of practical insights that highlights what really matters in analyzing data, and provides an intuitive understanding of how these core concepts can be used. The book does not emphasize any particular programming language or suite of data-analysis tools, focusing instead on high-level discussion of important design principles. This easy-to-read text ideally serves the needs of undergraduate and early graduate students embarking on an “Introduction to Data Science” course. It reveals how this discipline sits at the intersection of statistics, computer science, and machine learning, with a distinct heft and character of its own. Practitioners in these and related fields will find this book perfect for self-study as well. Additional learning tools: Contains “War Stories,” offering perspectives on how data science applies in the real world Includes “Homework Problems,” providing a wide range of exercises and projects for self-study Provides a complete set of lecture slides and online video lectures at www.data-manual.com Provides “Take-Home Lessons,” emphasizing the big-picture concepts to learn from each chapter Recommends exciting “Kaggle Challenges” from the online platform Kaggle Highlights “False Starts,” revealing the subtle reasons why certain approaches fail Offers examples taken from the data science television show “The Quant Shop” (www.quant-shop.com)

The overwhelming majority of a software system’s lifespan is spent in use, not in design or implementation. So, why does conventional wisdom insist that software engineers focus primarily on the

design and development of large-scale computing systems? In this collection of essays and articles, key members of Google's Site Reliability Team explain how and why their commitment to the entire lifecycle has enabled the company to successfully build, deploy, monitor, and maintain some of the largest software systems in the world. You'll learn the principles and practices that enable Google engineers to make systems more scalable, reliable, and efficient—lessons directly applicable to your organization. This book is divided into four sections: Introduction—Learn what site reliability engineering is and why it differs from conventional IT industry practices Principles—Examine the patterns, behaviors, and areas of concern that influence the work of a site reliability engineer (SRE) Practices—Understand the theory and practice of an SRE's day-to-day work: building and operating large distributed computing systems Management—Explore Google's best practices for training, communication, and meetings that your organization can use

The complexity of living organisms surpasses our unaided abilities of analysis. Hence, computational and mathematical methods are necessary for increasing our understanding of biological systems. At the same time, there has been a phenomenal recent progress allowing the application of novel formal methods to new domains. This progress has spurred a conspicuous optimism in computational biology. This optimism, in turn, has promoted a rapid increase in collaboration between specialists of biology with specialists of computer science. Through sheer complexity, however, many important biological problems are at present intractable, and it is not clear whether we will ever be able to solve such problems. We are in the process of learning what kind of model and what kind of analysis and synthesis techniques to use for a particular problem. Some existing formalisms have been readily used in biological problems, others have been adapted to biological needs, and still others have been especially

developed for biological systems. This Research Topic has examples of cases (1) employing existing methods, (2) adapting methods to biology, and (3) developing new methods. We can also see discrete and Boolean models, and the use of both simulators and model checkers. Synthesis is exemplified by manual and by machine-learning methods. We hope that the articles collected in this Research Topic will stimulate new research.

This book constitutes the refereed proceedings of the 15th International Conference on Model Driven Engineering Languages and Systems, MODELS 2012, held in Innsbruck, Austria, in September/October 2012. The 50 papers presented in this volume were carefully reviewed and selected from a total of 181 submissions. They are organized in topical sections named: metamodels and domain specific modeling; models at runtime; model management; modeling methods and tools, consistency analysis, software product lines; foundations of modeling; static analysis techniques; model testing and simulation; model transformation; model matching, tracing and synchronization; modeling practices and experience; and model analysis.

This book constitutes the thoroughly refereed joint postproceedings of the satellite activities held at the 7th International Conference on the Unified Modeling Language, UML 2004, in Lisbon, Portugal in October 2004 complementing the main conference track. The book presents reports on the 10 workshops held at UML and covers a broad range of topics around systems modelling; these reports are compiled by the respective workshop organizers. Furthermore 12 revised reviewed papers from the industry track are included as well as 11 short papers corresponding to selected poster/demo presentations and a summary on the UML tools exhibition.

This open access book provides a valuable restatement of the current law of armed conflict regarding hostilities in a diverse range of contexts: outer space, cyber operations, remote and autonomous weapons, undersea systems and devices, submarine cables, civilians participating in unmanned operations, military objectives by nature, civilian airliners, destruction of property, surrender, search and rescue, humanitarian assistance, cultural property, the natural environment, and more. The book was prepared by a group of experts after consultation with a number of key governments. It is intended to offer guidance for practitioners (mainly commanding officers); facilitate training at military colleges; and inform both instructors and graduate students of international law on the current state of the law.

This book presents selected papers from the International Conference on Emerging Research in Computing, Information, Communication and Applications, ERCICA 2018. The conference provided an interdisciplinary forum for researchers, professional engineers and scientists, educators, and technologists to discuss, debate and promote research and technology in the emerging areas of computing, information, communication and their applications. The book discusses these research areas, providing a valuable resource for researchers and practicing engineers alike.

The World Intellectual Property Report 2017 examines the crucial role of intangibles such as technology, design and branding in international manufacturing. Macroeconomic analysis is complemented by case studies of the global value chains for three products – coffee, photovoltaic energy cells and smartphones – to give an insightful picture of the importance of intellectual property and other intangibles in modern production.

Financial analysis is integral to business sustainability in determining an organisation's financial viability and revealing its strengths and weaknesses, a key requirement in today's competitive business environment. In a first of its kind, *Financial Statements Analysis: Cases from Corporate India*: evaluates the financial performance and efficiency of various corporate enterprises in India; presents actual case studies from eight core sectors (in manufacturing and services) — construction, cement, steel, automobile, power, telecom, banking, and Business Process Outsourcing (BPO); examines the financial statements on parameters such as financial ratios (profitability, solvency, and liquidity), while appraising their operating efficiency, market potential and valuation; and investigates their implications for larger decision-making and policy recommendations. It will be an important resource for scholars, teachers and students of business and management, commerce, finance, and accounting. It will also appeal to corporate trainers, senior executives and consultants in related fields.
