Thoughts and actions help us solve the problems we encounter every day. This unique approach allows students to understand the function and purpose of psychology and its topics first--psychology is no longer presented as a mixture of abstract topics that need to be memorized. This approach promotes critical thinking; as students progress through each chapter, they become engaged as they see the connection between problems and their psychological solutions. They also begin to relate the material to what they already know from their own lives. This theme extends across chapters, offering readers a consistent and effective learning framework.

This book reviews how people and animals learn and how their behaviors are changed as a result of learning. It describes the most important principles, theories, controversies, and experiments that pertain to learning and behavior that are applicable to diverse species and different learning situations. Both classic studies and recent trends and developments are explored, providing a comprehensive survey of the field. Although the behavioral approach is

emphasized, many cognitive theories are covered as well, along with a chapter on comparative cognition. Real-world examples and analogies make the concepts and theories more concrete and relevant to students. In addition, most chapters provide examples of how the principles covered have been applied in behavior modification and therapy. Thoroughly updated, each chapter features many new studies and references that reflect recent developments in the field. Learning objectives, bold-faced key terms, practice quizzes, a chapter summary, review questions, and a glossary are included. The volume is intended for undergraduate or

and accessible new edition offers all the content, pedagogy, and visual appeal that professors and students have come to expect from a successful introductory psychology text-and more.

Nairne's Second Edition offers a cohesive look at how psychology works in our everyday lives. This practical, motivating text presents all the topics you cover in your introductory course, but connects them in a way that adds meaning and consistency to your students' study of the discipline. And how does it do this? By introducing students to the adaptive mind-a theme based on the realization that our thoughts and actions stem from our need to adapt to our surroundings. This unique framework stresses

practical applications and helps students understand how we use psychology to deal with everyday challenges. Nairne builds all topics around an adaptive, problem-solving framework. He emphasizes the way that particular behaviors, though processes, and emotions help people solve problems-from memorizing a telephone number, to ducking under cover as a building begins to shake, to producing a quick physical response in the face of traffic hazards. This organizational framework also promotes a common theme of understanding across the chapters. This innovative approach may differ from the presentation you have come to expect from others texts.

Human memory, like other biological systems, has been subject to natural selection over the course of evolution. The goal of this volume is to present the best theoretical and empirical work on the adaptive nature of memory. The volume features current and relevant work of cognitive, developmental, and comparative psychologists.

This is a comprehensive undergraduate textbook which provides, in a single volume, chapters on both normal cognitive function and related clinical

Human Memory: Structures and Images offers students a comprehensive overview of research in human memory. Providing a theoretical background for the research, author Mary B. Howes uses a clear and accessible format to cover three major areas—mainstream experimental research; naturalistic research; and work in the domains of the amnesias, malfunctions of memory, and neuroscience.

interaction between cognition and emotion has always occupied a unique position within emotion research. Many philosophers and psychologists have been fascinated by the relationship between thinking and feeling. During the past 30 years, research on the relationship between cognition and emotion has boomed and so many studies on this topic have been published that it is difficult to keep track of the evidence. This book fulfils the need for a review of the existing evidence on particular aspects of the interplay between cognition and emotion. The book assembles a collection of state-of-the-art reviews of the most important topics in cognition and emotion research: emotion theories,

feeling and thinking, the perception of emotion, the expression of emotion, emotion regulation, emotion and memory, and emotion and attention. By bringing these reviews together, this book presents a unique overview of the knowledge that has been generated in the past decades about the many and complex ways in which cognition and emotion interact. As such, it provides a useful tool for both students and researchers alike, in the fields of social, clinical and cognitive psychology.
