Renal - WordPress.com

When renal function is impaired, dose adjustments or avoidances are necessary for renally excreted medications to prevent or minimise medication errors.<sup>3</sup>  
4 Also, the appropriate adjustment of medication dosage according to kidney function can optimise therapeutic efficacy.<sup>5</sup> Previous studies showed that poor renal function was one of the risk factors for medication-related hospital admission.<sup>4</sup> 6 Thus, consideration of renal function is important in using medications at safe and effective doses.<sup>7</sup>
