**Solution Chemistry Notes**

Solution Chemistry Notes. 2.

Solutions • Basic

definitions - Solution:

# Acces PDF Solution Chemistry Notes

homogenous mixture - Solute:  
substance that is dissolved  
- Solvent: substance that  
contains the solute in a  
solution • Process of  
Dissolving: - Molecules of  
the solvent "pull apart" the  
solute molecules, and

# Acces PDF Solution Chemistry Notes

distributes them within the solvent • How to tell the solute from the solvent - The substance that is in the greater amount is the solvent - The substance that keeps its phase is the solvent.

Revision Notes on Solution:  
A solution is a homogeneous mixture of two (or more) substances, the composition of which may vary between

# Acces PDF Solution Chemistry Notes

certain limits. A solution consisting of two components is called binary solution. The component which is present in large quantity is called solvent and the component which is small in quantity is called solute.

# Acces PDF Solution Chemistry Notes

## **Revision Notes on solutions | askIITians**

1. A solution is a homogeneous mixture of two or more chemically non-reacting substances. The components of a solution

# Acces PDF Solution Chemistry Notes

generally cannot be separated by filtration, settling or centrifuging. 2. A solution may be classified as solid, liquid or a gaseous solution. 3.

The solution which (I) Obey Raoult's law at all temperatures and concentrations (II)  $H_{mix} = 0$  i.e. no heat is evolved or absorbed when components are

# Acces PDF Solution Chemistry Notes

mixed to form the solution  
(III)  $V_{\text{mix}} = 0$  i.e. no  
change in volume. In ideal  
solution the A-B  
intermolecular interactions  
are the same as A-A and B-B  
inter-molecular  
interactions.

## **CBSE Class 12 Chemistry Notes Chapter 2 Solutions**

When a metal conducts it is the electrons that are moving through the metal.

When a salt solution conducts it is the ions in the solution that move

# Acces PDF Solution Chemistry Notes

towards the electrodes carrying the electrons. During electrolysis oxidation of the non-metal ions always occurs at the anode and reduction of the metal or hydrogen ions occurs at the cathode.
