How To Say Tourette's Syndrome

Tourette syndrome is a type of neurological disorder characterised by involuntary tics and repetitive vocalisations. The cause is unknown, but theories include genetic factors, bacterial infection and neurochemical abnormalities. Treatment can include medication, relaxation techniques and psychotherapy.

Tourette syndrome - Better Health Channel

The main symptoms of Tourette syndrome are motor tics (sudden, uncontrollable movements such as eye blinking, grimacing, head jerking, or shoulder shrugging) or vocal tics (such as throat clearing, sniffing, or humming). Complex motor tics may include jumping, touching other people, or, very rarely, biting or hitting self.
